Education

UNIVERSITY OF ENGINEERING AND TECHNOLOGY TAXILA (3.20/4)	Taxila, Pakistan
<i>Bachelor of Mechanical Engineering</i>	2019-2023
MUSLIM COLLEGE OF SCIENCE AND COMMERCE (938/1100)	Multan, Pakistan
<i>FSc. Pre-Engineering</i>	2017-2019

Professional Experience

BESTWAY CEMENT LIMITED, KALLAR KAHAR Kallar Kahar, Pakistan

A leading cement manufacturing company in Pakistan, known for its commitment to quality and innovation.

Internee: (July 2022 – September 2022)

- *Mechanical Component and Application:* Gained hands-on experience in performing maintenance and repair tasks on vertical roller mill and learnt about the various types of mechanical components used in cement manufacturing, such as gearboxes, bearings, conveyor systems, and pumps.
- *Cement Production:* Learnt about the different types of equipment used in cement production, such as crushers, stacker, reclaimer, ball mills, kilns, and conveyors.
- *Maintenance Strategies and Planning:* Acquired knowledge and practical skills in conducting regular equipment inspections, cleaning, and maintenance to prevent failure, and effectively managing assets by monitoring performance, identifying potential issues, and planning for upgrades or replacements.

ASME UET TAXILA CHAPTER Taxila, Pakistan

Internationally accredited society of UET Taxila that promotes the art, science, and practice of mechanical and multidisciplinary engineering and related sciences.

HR Executive:

- *Recruitment and Selection:* Demonstrated ability to source, screen, and hire top talent for a professional organization.
- *HR Policies and Procedures:* Experience developing and implementing HR policies and procedures.
- *Training and Development:* Experience in identifying training needs and developing training programs to enhance student skills and competencies.

Projects

Tribological Characterization of Spherical Spiral Groove Bearings (Final Year Project)

Focused on optimizing mechanical systems using innovative spherical spiral groove bearings (SSGB). Thoroughly analyzed tribological factors to enhance efficiency and minimize friction. Utilized comprehensive experimentation and comparison with Finite Element Analysis (FEA) to validate results.

Water Temperature Modulation Device

Designed a device using an Arduino microcontroller to modulate fluid temperature with high accuracy and reliability by adjusting hot and cold-water flow based on temperature inputs.

Automatic Motorbike Stand Slider

Designed an automated side stand slider system for motorcycles that automatically slides the side stand back in place when the bike is started, using a microcontroller circuit, motorized system, and a frame to hold the bike and stand in place.

Dual Axis Solar Tracker

Designed, developed, and tested a Dual Axis Solar Tracker (DAST) prototype that optimizes energy output of solar panels by tracking the sun's movement using a microcontroller, servo motors, and sensors.
